YAMLess — Golden Profiles Merge Report

feature/golden-profiles merged into main | Author: Sailaja

COMMIT	MERGE DATE	BRANCH	PROFILES ADDED
ed79231	2026-11-06	feature/golden-profiles	36

TEST RESULT

Summary

The feature/golden-profiles branch introduces a comprehensive library of 36 golden configuration profiles for Azure, AWS, and Kubernetes resources, along with governance gate templates, a cost estimator, pod disruption budget manifests, HPA stabilization enhancements, and backend Terraform templates.

This merge significantly expands YAMLess's ability to enforce environment-aware infrastructure standards across all four supported renderers: Container Apps, AKS, ECS, and EKS. It also expands the core modules by approximately 370 lines and adds 6 new tests to test_golden.py.

New Golden Profile JSONs (36 total)

Azure (15 profiles)

File	Resource Type
azure-postgresql.json	PostgreSQL Flexible Server
azure-mysql.json	MySQL Flexible Server
azure-redis.json	Azure Cache for Redis
azure-storage-account.json	Storage Account
azure-servicebus.json	Service Bus Namespace
azure-event-hubs.json	Event Hubs Namespace
azure-keyvault.json	Key Vault
azure-container-app.json	Container Apps
azure-aks-cluster.json	AKS Cluster
azure-container-registry.json	Container Registry
azure-cosmos-db.json	Cosmos DB Account
azure-api-management.json	API Management
azure-application-gateway.json	Application Gateway
azure-signalr.json	SignalR Service
azure-log-analytics-workspace.json	Log Analytics Workspace

AWS (12 profiles)

File	Resource Type
aws-rds.json	RDS (PostgreSQL/MySQL)
aws-s3.json	S3 Bucket
aws-sqs.json	SQS Queue

aws-elasticache-redis.json

ElastiCache Redis

aws-ecs-fargate.json

ECS Fargate Service

aws-eks-cluster.json

EKS Cluster

aws-msk.json

aws-ecr.json

Elastic Container Registry

aws-alb.json

Application Load Balancer

aws-secrets-manager.json

Secrets Manager

aws-wafv2.json

aws-cloudwatch.json

CloudWatch Alarms/Dashboards

Kubernetes (5 profiles)

File	Resource Type
kubernetes-deployment.json	Deployment
kubernetes-hpa.json	Horizontal Pod Autoscaler
kubernetes-ingress.json	Ingress
kubernetes-namespace.json	Namespace
kubernetes-network-policy.json	Network Policy

Cross-cutting (4 profiles)

File	Resource Type
iam-identity.json	IAM / Workload Identity
observability-standards.json	Observability Standards

New Features

Governance Gate Templates (governance.tf.j2)

- Container Apps: Sentinel/OPA stubs enforcing tagging, SKU constraints, allowed resource types
- AKS: Azure Policy assignments at cluster scope with deny effects for non-compliant workloads
- ECS: AWS Config rules and Service Control Policy stubs for ECS task IAM boundaries
- EKS: OPA Gatekeeper constraint templates for namespace labels and pod security standards
- All templates enforce required tags: environment, team, cost-centre, managed-by

Cost Estimator (src/yamless/cost_estimator.py — 628 lines)

- Looks up unit pricing for Azure and AWS resource SKUs from golden profiles
- Aggregates estimated monthly costs per environment (dev vs production)
- Outputs a cost summary table alongside the rendered Terraform
- Integrates with the CLI via the new 'yamless estimate' subcommand

PodDisruptionBudget Manifests (pdb.yaml.j2)

- Added for both AKS and EKS renderers
- Minimum available replicas derived from the golden profile min_replicas field
- Selector labels aligned with the deployment's app label
- Rendered alongside existing deployment and HPA manifests

HPA Stabilization Windows & Topology Spread Constraints

- scaleDown.stabilizationWindowSeconds (default 300 s) — prevents replica flapping
- scaleUp.stabilizationWindowSeconds (default 60 s) — faster scale-out response
- Topology spread constraints spread pods across AZs with whenUnsatisfiable: DoNotSchedule

Backend Terraform (backend.tf.j2) and terraform.tfvars.example.j2

- Azure renderers: Azure Blob Storage backend, key derived from app slug and environment
- AWS renderers: S3 backend with DynamoDB locking table
- terraform.tfvars.example.j2 provides documented variable file template for each renderer

Expanded Core Modules

Module	Lines Added	Key Changes

src/yamless/golden.py

+177

Profile merging logic; env overlay; inheritance chains

src/yamless/profile.py

+77

Cost estimator fields; validation helpers

src/yamless/gap_filler.py

+67

Gap-filling heuristics for new profile keys

src/yamless/cli.py

+47

estimate subcommand; --profile-dir flag

Test Results

187	0	1	6
PASSED	FAILED	WARNING	NEW TESTS

```
platform darwin -- Python 3.11.9, pytest-9.2.0
rootdir: /Users/zafar/yamless

tests/test_analyzer.py      47 passed
tests/test_arch_drift.py    24 passed
tests/test_env_scanner.py   27 passed
tests/test_gap_filler.py     2 passed
tests/test_golden.py        20 passed   <-- 6 new tests
tests/test_renderer.py      62 passed
tests/test_validator.py      5 passed

====  187 passed, 1 warning in 5.04s  ====
```

New Tests in test_golden.py

#	Test Name	What It Covers
1	test_load_known_azure_resource_dev	Loading an Azure profile for dev
2	test_load_known_azure_resource_production	Loading an Azure profile for production
3	test_load_known_aws_resource	Loading a known AWS resource profile
4	test_load_missing_resource_returns_empty_dict	Graceful handling of unknown resource
5	test_load_missing_cloud_returns_empty_dict	Graceful handling of unknown cloud
6	test_load_missing_both_returns_empty_dict	Graceful handling of both unknown

Repository Details

Field	Value
Commit	ed79231
Merge Date	2026-11-06
